

SmartFACE
Biometric face recognition

Applications

SmartFACE

SmartFACE is IProNet's face recognition solution consisting in identifying people who appear on the image using a previously created data base.

This system allows the user to register people on lists through captured images from the cameras or imported from files, creating a template of the person.

Specially suitable for access control.

LEADING IP VIDEO

SmartFACE

Biometric face recognition

Scalable and integrable with all video solutions, notifications and alarms of IProNet IP technology.

Features:

Capture and face analysis

- Real time identification
- Recognition on recordings
- Log of captured and matching images
- Management of several access points simultaneously with just one camera
- Transmission over IP networks

Personnel management

- Multiple people lists (students, teachers, cleaning and security stuff, blacklists, etc.)
- Customized actions according to the nature of the identified person

Compatibility with IProNet action protocol

- Recordings, pop-ups, SMS sending, digital I/O activation, etc.

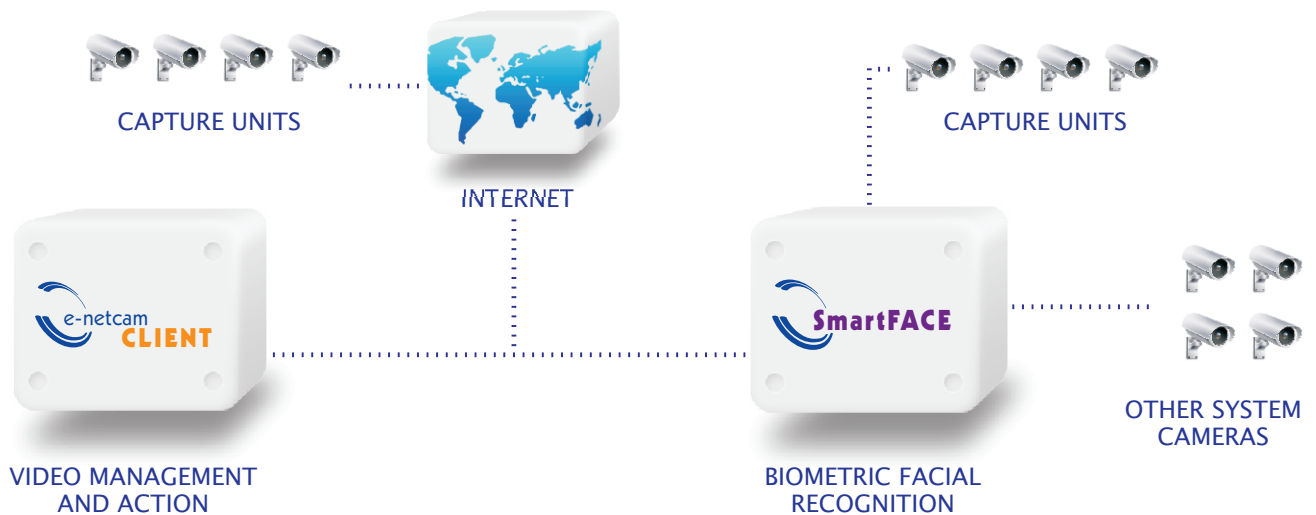

Different operating modes

- Automatic mode recognition or "free flow"
- Manual capture
- Recognition triggered by events (digital input, motion detection, etc.)
- Integration through SDK

Application areas

- Entrances and restricted accesses
- Black lists and people control (e.g. casinos)
- Airports and passenger stations
- Lounges
- Government buildings
- Upgrade of biometric access controls

Modularity and scalability
