

Video Surveillance as a Service developed by IProNet

IProNet Web Advanced Platform (IWAP)

IProNet Web Advanced Platform is the solution for IP video management designed and developed by IProNet to provide video surveillance as a service. **IWAP** has been developed for **providers** wishing to offer their customers **video surveillance and recording services** centralized through the Internet.

Applications

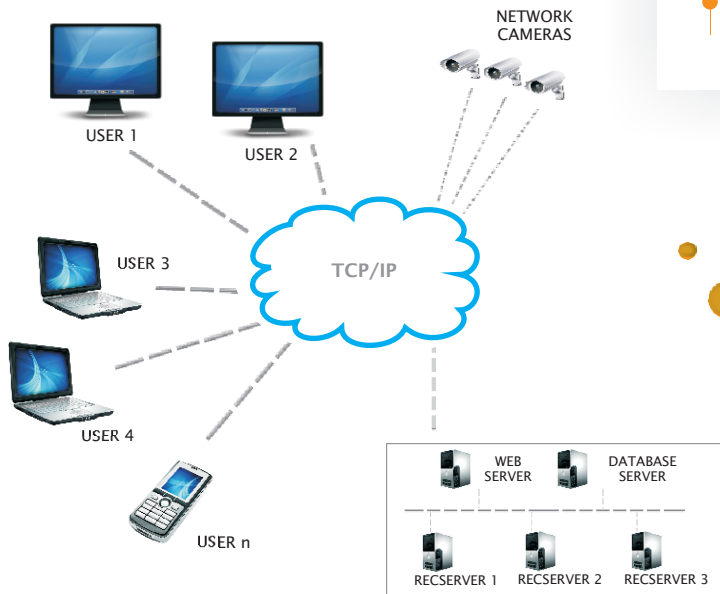

The IP video surveillance platform developed by IProNet has the objective to provide video management in a more widespread, scalable and easy way to more IP camera installations.

- IP video management as a service
- Maximize equipment performance
- Secure installations, unlimited scalability
- Access to the video system anywhere, anytime
- Integration into existing platforms

VSaaS. Video Surveillance as a Service

VSaaS is the model of Video Surveillance where the customer remotely manages, displays and records video in real time.

IWAP is IProNet's reply to the market demand and trend, developed with the latest technology to provide video surveillance remotely with low initial costs, and without the need to invest in local NVR's.

Overall system architecture

Performance and Architecture

Interaction between system and the user is performed through a **Web Portal** where customers can manage their cameras, live views, on demand recordings, check recording/events and schedule them with calendars based on their needs.

The system is based on the core of IProNet's solutions e-netcamCLIENT IP video manager, sharing its recording and video access engine.

LEADING IP VIDEO

IWAP

Remote monitoring Service through the internet

As a main feature of this new service, the customer obtains a service provided and managed by its supplier through a fee.

The service can be chosen depending on the needs of the customer:

| | | | |
|---------------|---------------|----------------|----------------|
| PACK 1 | PACK 2 | PACK 3 | PACK 4 |
| 20 CAMERAS | 50 CAMERAS | 100 CAMERAS | 200 CAMERAS |

Customers can purchase 10 camera Upgrade Packs to expand those Packs previously hired.

UPGRADE

+10
CAMERAS

* For large installations, configurations available

Basic Display module includes:

- ALL UPDATES AND NEW SOFTWARE VERSIONS

- 1 DAILY CHECKING CONNECTION FROM MONDAY TO FRIDAY (WORKING DAYS)

Additional modules can be added to Basic Display module:

RECORDINGS

MOBILE CONNECTION

The customer may additionally hire the Medium or Advanced Option for daily service checking, depending on its needs.

MEDIUM OPTION

ADVANCED OPTION

3 daily control connections from monday to friday (working days)

3 daily control connections from monday to sunday

Innovation and competitive edge

IWAP solution offers a lot of competitive advantages compared to other similar solutions. They could be organized according to the following points:

Features

Given IProNet's know-how developing IP Video solutions and the use of the core recording engine e-netcamCLIENT, the system offers the user a wide variety of features.

Security

In a solution of this kind, the privacy of each user information is a critical issue. IWAP architectural solution design avoids shared information between users, in a way that it is not possible for a user to be offered relevant information of another one.

Scalability

A weak point of centralized recording systems is often its capacity of growth. IWAP solution has been designed with scalability as a main objective. The architecture allows the existence of many REC Servers as necessary at any time. This allows to set up the initial system with a small investment and expand gradually as the number of users and cameras increase.

Stability

The recording engine system is based on IProNet's e-netcamCLIENT management software, application used for the management of more than 100,000 IP video channels. IProNet has installed worldwide. The wide range of systems controlled by e-netcamCLIENT ensures stable and secure operation.

Compatibility

IWAP solution is compatible with all those IP video manufacturers supported by the full range of IProNet applications. Moreover, by sharing much of modules and functionalities with the traditional IP video management applications, IWAP system is compatible with all applications available on IProNet's product portfolio.
